

Every Patient Engagement. Intelligently Automated.

Engageo is the AI-powered operating system for clinics that ensures every call, message and lead converts into a booked appointment and a lifelong patient relationship.

Product Flow Documentation • Engageo Agency LLP, Pune • 9-Stage Patient Lifecycle Architecture

Core Value Pillars

Never Miss a Patient

AI handles every call and inquiry instantly, across every hour of the day.

Automate. Follow. Convert.

End-to-end automation across WhatsApp, calls and follow-ups.

Grow Revenue

More appointments, lower no-shows, higher patient lifetime value.

AI Insights That Matter

Actionable insights that help the clinic grow smarter, not just faster.

The Loop in One Line

Nine stages, one continuous cycle. Every stage writes into the CRM, and the CRM feeds the next stage.

Contact → AI Conversation → Booking → Visit Outcome → Follow-up → CRM → Analytics → Insights → Staff Action → back to CRM

Positioning in one line. Engageo is not a call answering tool. It is the operating system that sits between every inbound patient signal and every rupee of clinic revenue, and it keeps learning from both.

Document Structure

NINE STAGES ACROSS FIVE SYSTEM LAYERS

SECTION	STAGE	WHAT IT COVERS
1	Patient Initiates Contact	Channels, intake, identification, intent routing
2	AI Conversation & Qualification	Clinic knowledge, conversation, booking, WhatsApp automation
3	Patient Visit Outcome	Show vs. no-show branching
4	Follow-ups & Nurturing	Post-visit lifecycle campaigns
5	Engageo CRM	Patient 360, lead pipeline, history
6	Analytics Engine	Call, conversion, revenue and operational metrics
7	AI Insights	Predictive and prescriptive signals
8	Doctor / Staff Action	Human action layer on top of insights
9	Loop Back to CRM	Feedback loop that compounds system intelligence

How to read this document. Stages 1 to 4 are the linear patient journey. Stages 5 and 6 are the persistence and measurement layers that every stage writes into. Stages 7 to 9 form the closed loop that turns captured data back into clinic action, and clinic action back into training signal.

1 Patient Initiates Contact

CAPTURE LAYER • OMNICHANNEL ENTRY INTO THE SYSTEM

Every inbound touchpoint enters a single pipeline. Regardless of the channel a patient chooses, the same intake, identification and routing logic applies.

1.1 Entry Channels

CHANNEL	NATURE OF CONTACT
Phone Call	Voice inbound, handled by the AI receptionist
WhatsApp	Text conversation and automation channel
Website	Web enquiries and booking requests
Instagram / Social	Social DMs and campaign responses
Google / Other Leads	Listings, ads and third-party lead sources

1.2 Engageo Intake & Identification

The system captures and identifies the patient or lead instantly at the point of contact, before any conversation logic runs.

1.3 Existing Patient Check

BRANCH	ACTION
YES Existing patient	Retrieve Patient Profile: history, preferences and prior appointments are loaded into the conversation.
NO New contact	Create Lead / New Patient: a fresh record is opened and pushed into the lead pipeline.

1.4 AI Orchestrator

The orchestrator understands intent and routes the conversation to the correct downstream path. It is the single decision point between capture and conversation.

1.5 Intent Detected

INTENT	ROUTES TO
Booking	Appointment booking flow (Section 2)
Question	Clinic knowledge and FAQ handling (Section 2)
Follow-up	Nurturing and post-visit flows (Section 4)

Contact → Intake & Identification → Existing Patient? → AI Orchestrator → Intent Detected

2 AI Conversation & Qualification

CONVERSATION LAYER • KNOWLEDGE, QUALIFICATION, BOOKING, CONFIRMATION

The conversation is grounded in clinic-specific configuration rather than generic responses. The AI qualifies the contact, then either books or nurtures.

2.1 Clinic Knowledge Base

KNOWLEDGE DOMAIN	USED FOR
Doctors & Timings	Who is available, when, and for which service
Services & Pricing	Answering cost and treatment questions accurately
Availability	Real slot position before any commitment is made
Policies & FAQs	Cancellation, payment, preparation and repeat questions
Rules & Preferences	Clinic-specific handling rules that shape AI behaviour

2.2 AI Conversation

Natural, human-like conversation across voice or chat, using the same knowledge base on both modalities so the answer does not change with the channel.

2.3 Ready to Book?

BRANCH	PATH
NO Not ready	Nurture / Answer FAQ / Engage. The contact stays in the pipeline instead of being dropped.
YES Ready	Proceed to Book.

2.4 Book Appointment Sequence

1 Check calendar → 2 Show available slots → 3 Patient selects slot → 4 Confirm appointment → 5 CRM record updated

2.5 WhatsApp Automation Cadence

MESSAGE	TIMING
Confirmation	Instant, on booking
Reminder 1	24 to 48 hours before the appointment
Reminder 2	24 hours before the appointment
Preparation message	3 hours before the appointment

Why the cadence matters. The reminder ladder is the primary lever on no-show rate, and it is automated at booking time, so it costs the clinic zero staff effort per appointment.

3 Patient Visit Outcome

OUTCOME LAYER • BRANCHING ON ATTENDANCE

Every booked appointment resolves into one of two states, and each state has its own automated continuation. Neither outcome is a dead end.

OUTCOME	AUTOMATED CONTINUATION
✓ SHOW	Post-visit automation: the patient enters the follow-up and nurturing track.
× NO-SHOW	Rebooking flow: the patient is re-engaged and pushed back into the booking sequence rather than lost.

Appointment → Show → Post-visit Automation | Appointment → No-Show → Rebooking Flow → back to booking

4 Follow-ups & Nurturing

RETENTION LAYER • LIFETIME VALUE ENGINE

Four nurturing tracks run after the visit outcome. This is where a one-time patient becomes a recurring one.

TRACK	PURPOSE
Treatment Follow-up	Post-treatment check-ins and continuity of care
Feedback / Review	Capture patient experience and generate public reviews
Reactivation Campaigns	Bring back dormant and lapsed patients
Seasonal / Special Offers	Targeted campaigns tied to season, service or segment

Loop-back behaviour. Both the no-show rebooking flow and the nurturing tracks feed back into Section 2, re-entering the AI conversation and booking sequence. The patient journey is a cycle, not a funnel with an exit.

5 Engageo CRM

DATA LAYER • SINGLE SOURCE OF TRUTH FOR THE CLINIC

Every stage writes into the CRM, and every stage reads from it. It holds six views of the same patient record.

CRM MODULE	WHAT IT HOLDS
Patient 360° View	The complete consolidated record for a single patient
Lead Pipeline	Unconverted leads and their qualification stage
Appointments & Payments	Booking history and transaction record
Preferences & Tags	Segmentation attributes used to target campaigns
Conversations & History	Full transcript history across voice and chat
Activity Timeline	Chronological record of every touchpoint and outcome

Write paths into the CRM

- Section 1: new lead creation and patient identification
- Section 2: booking confirmation and CRM record update
- Section 3: visit outcome, show or no-show
- Section 4: campaign engagement and follow-up responses
- Section 9: staff actions and closed outcomes fed back in

Architectural note. The CRM is positioned as the system of record, not as a reporting sidecar. The AI reads clinic knowledge and patient state from it at conversation time, which is what allows configuration to be per clinic without changing the conversation logic.

6 Analytics Engine

MEASUREMENT LAYER • ILLUSTRATIVE DASHBOARD FIGURES

The analytics engine reports across three headline categories and four operational metrics. The numbers below are the sample values shown on the product dashboard, not audited production results.

6.1 Headline Metrics

6.2 Operational Metrics

6.3 Trend and Distribution Views

VIEW	REPORTS
Calls Over Time	Call volume trend across the reporting period
Lead Sources	Distribution across Calls, WhatsApp, Website and Other
No-Show Rate trend	Movement in missed appointments over time
Response Time trend	Speed of first response over time
LTV trend	Patient lifetime value movement

Caveat for external use. All figures in this section are illustrative dashboard sample data. Replace them with measured clinic results before using this document with investors, clinics or in any commercial proposal.

7 AI Insights

INTELLIGENCE LAYER • PREDICTION AND NEXT BEST ACTION

The insights layer converts CRM and analytics data into five specific signals the clinic can act on.

INSIGHT	WHAT IT TELLS THE CLINIC
Best Time to Call	Higher connect windows for outbound attempts
High Intent Leads	Leads that are ready to book now
No-Show Risk	Patients at risk of missing their appointment
Revenue Opportunities	Upsell and cross-sell opportunities in the base
Action Recommended	The next best action for the team

8 Doctor / Staff Action

HUMAN LAYER • WHERE INSIGHT BECOMES REVENUE

The clinic team acts on the insights: follow up on flagged contacts, work the high-intent list, and close more appointments. The AI narrows the list; the staff converts it.

9 Loop Back to CRM

FEEDBACK LAYER • COMPOUNDING SYSTEM INTELLIGENCE

Every action and outcome feeds back into the system to make the AI smarter. Staff actions, conversion results and campaign responses all return to the CRM, which in turn improves the analytics engine and the quality of the next set of insights.

CRM → Analytics Engine → AI Insights → Doctor / Staff Action → Loop Back to CRM → repeat

End-to-End Flow Summary

STAGE	FUNCTION	LAYER
1	Contact captured, identified, intent routed	Capture
2	Conversation, qualification, booking, reminders	Conversation
3	Show or no-show, each with its own automation	Outcome
4	Follow-up, feedback, reactivation, offers	Retention
5	System of record for patients, leads, history	Data
6	Call, conversion and revenue reporting	Measurement
7	Predictive and prescriptive signals	Intelligence
8	Staff execution on flagged opportunities	Human
9	Outcomes returned to the system	Feedback

Business Outcomes

WHAT THE CLINIC GETS FROM THE LOOP

OUTCOME	DRIVER
More Appointments	Higher booking rate from instant, always-on response
Lower No-Shows	Better reminders and engagement across the WhatsApp cadence
Stronger Relationships	Personalisation at scale, driven by the Patient 360 record
Higher Revenue	Recovered revenue leaks and profitable growth
Data-Driven Growth	AI insights that predict and perform

The Compounding Argument

Each stage of the flow produces data that improves a later stage. Capture feeds the CRM, the CRM feeds analytics, analytics feeds insights, insights direct staff action, and staff action feeds back into the CRM. The result is a system whose accuracy and revenue impact increase with usage rather than degrading with volume.
